

The Series 107 Silo Receiver is designed for mounting on top of large storage silos, when conveying from a dense phase or dilute phase pneumatic conveying system or a pneumatic truck. The silo receiver simplifies and eliminates the conventional tubing bends in a more conventional system design and the higher maintenance which

usually accompanies them. Completely ceramic lined for abrasion resistance, it is available in both mild steel and stainless steel construction. Standard sizes are available from 2 inch through 10 inch pipe or tubing sizes. Optional larger pipe and tubing sizes are available upon request
